AI Blueprint for Advisors

A wholesaler value-add to help advisors save time, communicate better, and grow their practice.

Who to meet. What to prepare. What to communicate. What to follow up on.

The Big Idea

Most financial professionals already know the business. The bottleneck is time, organization, consistency, and execution. AI should be used as a simple operating system, not a complicated technology project.

The Opportunity

The best users are often established producers. They have relationships, revenue, and experience - but many are overwhelmed by technology. Your edge is to simplify and deliver.

Workflow	How AI Helps
1. Client Meeting Prep	Create client prep sheets with agenda, concerns, planning topics, personal details, and next-step checklist.
2. Follow-Up	Turn meeting notes into client recap emails, internal CRM notes, tasks, and service follow-through.
3. Communication	Translate market updates into calm, plain-English client language without predictions or promissory claims.
4. Prospecting	Draft referral requests, COI outreach, LinkedIn messages, event invites, and prospect follow-ups.
5. Client Segmentation	Group clients by life stage, retirement timeline, cash needs, risk concerns, tax sensitivity, and life events.
6. Admin Efficiency	Summarize email threads, build agendas, clean notes, organize weekly priorities, and create task lists.

Simple Weekly Operating System

- Monday: proactive client outreach list
- Pre-meeting: client prep sheet
- Post-meeting: recap + task list
- Friday: open follow-ups + service items

Compliance Guardrails

- Do not use promissory language or guarantees.
- Use current, approved product language and data.
- Human review before external use.
- Follow firm AI, privacy, and marketing policies.

Prompt to use: Turn these client notes into a meeting agenda, client-friendly follow-up email, internal CRM note, and task list.

Bottom line: AI helps advisors spend less time on admin and more time with clients.
