The AI Revenue Operating System

A simple blueprint for wholesalers and advisors in asset management

AI should not feel like a technology project. For established advisors and wholesalers, AI should be a simple operating system that saves time, improves follow-up, sharpens messaging, and creates more revenue opportunities. The goal is not to become technical. The goal is to simplify and deliver.

Core Promise

For Wholesalers	For Advisors
Who to call. What to say. What to send. What to do next.	Who to meet. What to prepare. What to communicate. What to follow up on.

Why This Works

• The best opportunities are often older, established producers with books of business, relationships, and trust.

• Many of them are not technical. That is not a weakness - it is the opportunity.

• They do not need advanced prompt engineering. They need repeatable workflows that solve daily problems.

• The winning positioning is practical: here is what to click, what to type, how this saves time, and how it supports revenue.

Part 1: AI Blueprint for Wholesalers

Objective: optimize the territory, improve meeting quality, increase follow-up consistency, and create more revenue opportunities.

1. Territory Intelligence

Use AI to organize messy territory data into a ranked action plan.

Outputs:

- Advisor lists
- CRM notes
- Production and fund flow reports
- Meeting history
- Firm/platform data
- Geographic clusters

> Prompt: Rank these advisors by opportunity. Group them into A, B, and C priority. Tell me who to call first, why now, the likely product angle, and the next action.

2. Meeting Prep

Use AI to walk into every meeting with a simple advisor brief.

Outputs:

- Advisor background
- Known holdings or recent activity
- Likely business priorities
- Product angle
- Questions to ask
- Recommended next step

> Prompt: Create a 5-minute meeting prep sheet for this advisor. Include conversation starters, likely objections, smart questions, and a recommended next step.

3. Product Story Simplification

Use AI to turn complex products into advisor language.

Outputs:

- The client problem
- Why it matters now
- Where the strategy fits
- What makes it different
- What action the advisor should consider

> Prompt: Explain this fund to a financial advisor in plain English. Focus on the problem it solves, where it may fit, and how to discuss it without overpromising.

4. Follow-Up Machine

Use AI to make every meeting produce a clean next step.

Outputs:

- Advisor-facing follow-up email
- CRM note
- Task list
- Resources to send
- Future talking points

> Prompt: Turn these meeting notes into a short compliant follow-up email, a CRM note, and three next-step actions.

5. Advisor Segmentation

Use AI to stop treating every advisor the same.

Outputs:

- Current buyers
- Past buyers
- Product-specific prospects
- High AUM / low engagement
- Event candidates
- Dormant relationships

> Prompt: Segment this advisor list by likely opportunity and recommend a message for each group.

6. Call Block Optimizer

Use AI to make daily call time more productive.

Outputs:

- Call priority
- Reason to call
- Opening line
- Question to ask
- Desired outcome

> Prompt: Create a 90-minute call block from this advisor list. Prioritize who to call, what to say, and what result I should drive.

7. Campaign Builder

Use AI to turn a product idea into a full sales campaign.

Outputs:

- Campaign theme
- Advisor invite
- Call script
- Follow-up sequence
- Event topic
- LinkedIn post

Prompt: Build a 3-week advisor campaign around this product theme. Include email copy, call scripts, event ideas, follow-ups, and advisor questions.

Wholesaler Daily System

- Morning: Ask for the top 10 territory actions.
- Before meetings: Ask for a 5-minute advisor prep sheet.
- After meetings: Convert notes into follow-up, CRM note, and tasks.
- Friday: Review stuck opportunities and next week focus.

Part 2: AI Blueprint for Advisors

Objective: provide a wholesaler value-add that helps advisors save time, communicate more clearly, serve clients proactively, and grow their practice.

1. Client Meeting Prep

Use AI to help advisors prepare faster and create better client meetings.

Outputs:

- Meeting agenda
- Key concerns
- Planning topics
- Personal details to remember
- Portfolio talking points
- Follow-up checklist

> Prompt: Create a client meeting prep sheet from these notes. Include key discussion points, likely concerns, questions to ask, and follow-up items.

2. Client Follow-Up

Use AI to make post-meeting follow-up fast and professional.

Outputs:

- Client recap email
- Internal CRM note
- Action items
- Follow-up timeline
- Items requiring advisor review

> Prompt: Turn these meeting notes into a professional client follow-up email, internal CRM note, and task list.

3. Client Communication Simplifier

Use AI to explain markets in plain English.

Outputs:

- What happened
- Why it matters
- What we are watching
- What we are not overreacting to
- What clients should remember

> Prompt: Explain this market update in simple client-friendly language. Avoid jargon, avoid predictions, and focus on long-term planning.

4. Prospecting and Referral Support

Use AI to help advisors grow without sounding salesy.

Outputs:

- Referral email

- COI outreach
- LinkedIn message
- Event invitation
- Prospect follow-up

> Prompt: Write a professional referral request email for an advisor to send to a satisfied client. Make it warm, low-pressure, and compliant.

5. Client Segmentation

Use AI to identify who needs attention and why.

Outputs:

- Pre-retirees
- Retirees
- Business owners
- Cash-heavy clients
- Tax-sensitive clients
- Clients with recent life events

> Prompt: Segment this client list into groups and recommend one communication idea for each group.

6. Portfolio Review Support

Use AI to organize the conversation, not make the investment decision.

Outputs:

- Review agenda
- Risk discussion
- Income discussion
- Diversification language
- Tax considerations
- Follow-up items

> Prompt: Create a plain-English portfolio review agenda focused on risk, income, diversification, tax considerations, and long-term goals.

7. Content Creation

Use AI to help advisors stay visible with clients and prospects.

Outputs:

- Newsletter ideas
- LinkedIn posts
- Client education emails
- Seminar titles
- Short video scripts
- FAQs

Prompt: Create five client-friendly content ideas for retirees worried about market volatility. Keep them educational and non-promissory.

8. Administrative Efficiency

Use AI to reduce administrative drag.

Outputs:

- Email summaries
- Response drafts
- Clean meeting notes
- Weekly priority lists
- Task lists
- Agenda drafts

Prompt: Summarize this email thread and identify decisions, open items, deadlines, and next steps.

Advisor Weekly System

- Monday: Build a proactive client outreach list.
- Before client meetings: Create a client prep sheet.
- After client meetings: Create recap, CRM note, and task list.
- Friday: Summarize open follow-ups, client service items, and business development opportunities.

Part 3: How the Wholesaler Uses This as a Value-Add

The wholesaler becomes more than a product salesperson. They become a practice management partner who helps advisors save time, improve communication, and grow revenue opportunities.

Better Door Opener

Instead of asking for time to talk about a fund, the wholesaler can say:

> I have been helping advisors use simple AI workflows to save time on meeting prep, follow-up, client communication, and prospecting. I can show you a 20-minute blueprint you can use immediately.

The 20-Minute AI Practice Audit

- How do you currently prep for client meetings?
- How do you handle follow-up?
- How often do you proactively segment clients?
- How do you create client communication?
- What admin work eats up the most time?
- Where do you lose momentum with prospects?
- What part of your practice feels most manual?

Three Workflows to Demonstrate

Workflow	Demonstration	Value
Meeting Notes to Follow-Up	Paste rough notes and create a client/advisor follow-up, CRM note, and task list.	Faster follow-through
Market Update to Plain English	Turn complex commentary into clear client language.	Better communication
List to Segmented Outreach	Group clients or advisors by opportunity and create messaging.	More proactive growth

Compliance Guardrails

- AI is a drafting, organization, and workflow tool - not a final approver.
- Do not use AI to make final investment recommendations.
- Do not guarantee outcomes, imply certainty, or use promissory language.
- Do not enter private client information unless the firm allows it and the system is approved.
- Use approved product language and current performance data.
- All external-facing material should be reviewed under firm policy.
- Keep documentation where required by firm policy and applicable regulation.

Safer Language Examples

Instead of	Use
This fund will outperform.	This strategy may appeal to advisors looking for exposure to companies with strong free cash flow characteristics.

Your clients need this.	This may be worth reviewing for clients seeking a specific outcome as part of a broader plan.
Now is the time to buy.	This may be a good time to review whether the current allocation still matches the client's goals.

Signature Positioning

I teach wholesalers and advisors how to use AI in the simplest way possible to save time, increase productivity, and create more revenue opportunities - without becoming tech experts.

Simplify and deliver.
