AI Blueprint for Wholesalers

Optimize the territory. Improve follow-up. Drive more revenue opportunities.

Who to call. What to say. What to send. What to do next.

The Big Idea

Most financial professionals already know the business. The bottleneck is time, organization, consistency, and execution. AI should be used as a simple operating system, not a complicated technology project.

The Opportunity

The best users are often established producers. They have relationships, revenue, and experience - but many are overwhelmed by technology. Your edge is to simplify and deliver.

Workflow	How AI Helps
1. Territory Intelligence	Rank advisors by opportunity using production, CRM notes, firm/platform data, meeting history, and recent flows.
2. Meeting Prep	Create 5-minute advisor briefs with background, product angle, objections, questions, and next best action.
3. Product Story	Convert complex product details into plain-English advisor language: problem, fit, difference, and action.
4. Follow-Up Machine	Turn rough notes into CRM notes, advisor emails, task lists, and future talking points.
5. Segmentation	Group advisors into current buyers, past buyers, product prospects, event candidates, and dormant opportunities.
6. Call Block Optimizer	Build daily call blocks with priority, reason to call, opener, question, and desired outcome.

Simple Weekly Operating System

- Morning: top 10 territory actions
- Pre-meeting: advisor prep sheet
- Post-meeting: follow-up + CRM note
- Friday: stuck opportunities + next week focus

Compliance Guardrails

- Do not use promissory language or guarantees.
- Use current, approved product language and data.
- Human review before external use.
- Follow firm AI, privacy, and marketing policies.

Prompt to use: Rank this advisor list by opportunity. Tell me who to call first, why now, what to say, and what next step I should drive.

Bottom line: AI helps wholesalers spend less time organizing and more time selling.
